

CLOUD COMPUTING AND HOSTING FOR BUDGET-CONSCIOUS CONTRACTORS

As owners and contractors continue to look to cut costs and maximize performance the demands for cloud IT and managed hosting services continue to grow. By removing the burden of in-house hardware infrastructure, hosted technology solutions are easier to get up and running and maintain. A recent study by IDC (Intl. Data Corp.) suggests that revenue from IT cloud services is on track to grow 21.6% between 2009 and 2014.

Byrne Software supports a number of customers that have decided a cloud-based Prolog solution is best for their organization. By choosing to have their Prolog application hosted, businesses can focus on managing their project portfolio and not their software.

Other Benefits:

- An organization's Total Cost of Ownership (TCO) is reduced
- Scalable and accessible
- Greater level of productivity with guaranteed up-time
- Security of information

Is Managed Hosting right for your critical construction applications? To learn more about the advantages contact Rick Kilfoy at rjk@byrnesoftware.com for a custom price quote.

CURRENT PROLOG PROMOTION

BEST PRACTICES WHITE PAPERS

Byrne Software has developed several white papers as part of our *Project Portfolio Management Business Process Series*. The **“Project Management Over the PBO Lifecycle”** and **“Collaboration and Process Alignment in Design and Construction”** white papers are designed to provide project-based organizations with industry best practices for project management.

Our company is recognized as an industry leader specializing in providing consulting services to properly align technology with construction business processes. It is our goal to provide additional knowledge for our customers implementing Converge to enhance their project collaboration capabilities, and help Prolog Manager users standardize their processes to stay competitive in the marketplace.

UPCOMING BIM & PROJECT CONTROLS EVENT

Join building and construction industry professionals for a complimentary breakfast and a compelling, informational seminar series called, **“Leveraging a BIM Strategy to Improve Construction Project Delivery”** on May 18, 2011 in Kansas City, MO. Implementing BIM strategies for integrated project delivery and field coordination present challenges that impact an owner’s time to revenue and service provider margin – and even professional credibility. Leading professionals in BIM technology, field solutions, and project management will review the value of process synergies and technologies as applied to collaboration and project delivery.

Seminar Objectives:

- Explore the latest approaches and tools for advancing construction project performance
- Create BIM alignment with process, people and technologies
- Apply Project Controls to support Virtual Design coordination
- Insight on business strategies for integrating BIM models and cost data
- Ensure efficient communication and collaboration for the field

Agenda:

When: May 18, 2011, 7:30 to 10:30 a.m. (Continental Breakfast Served)

Where: The Builder’s Association of Kansas City Training Center

Hutton Conference Room

105 W. 12th Avenue

North Kansas City, Missouri

How to Register: Go to Byrne Software’s [News & Events](#) page to learn more and register, or call Elizabeth Rugh at 636-534-6161.

Webinar Event: How Clayco Improved Cost Management with Integrated Financials and Prolog Construction Project Management

REGISTER NOW

May 19th 10:00am Pacific

Clayco, Inc. is one of the nation's largest privately owned real estate, architecture and engineering, design/build and construction firms with a national reputation for excellence that has been earned through achievements in safety management, fast-track schedules and technology and design innovation.

Join us for this 1-hour Webinar where a Clayco Sr. Project Manager will discuss how Prolog provides critical business value. Then, the Clayco CIO will review how the financial integration strategy resulted in significant additional improvements in project controls including:

- Increased quality and accuracy of budget forecasting—in less time
- Elimination of redundant data entry
- Standardized processes across the organization
- Better executive oversight
- Improved collaboration between systems and internal resources
